

MAGNETIC RESONANCE IMAGING (MRI)

This is an MRI machine. It takes pictures of our brains while we lay still and quiet. Researchers take these pictures so they can see what our brain looks like and how it grows over time! **Use your brain to find the exit in the maze.**

Children's Hospital of Philadelphia Research Institute continues its groundbreaking research on numerous diseases and disorders that effect children. Without families and individuals like you to participate in research, many breakthroughs would not be possible. **Scan the QR code on the left to sign up to our Research Participant Registry. Questions? E-mail the Recruitment Enhancement Core at participantrecruitme@email.chop.edu or call 267-426-6846.**
