

PATHOLOGY CORE

Saving Images in Image Scope

In order to save images as TIFF files the Image Scope viewer must be used. Once a slide is opened in image scope you can select the extract region tool (floppy disk icon) in the tool bar:

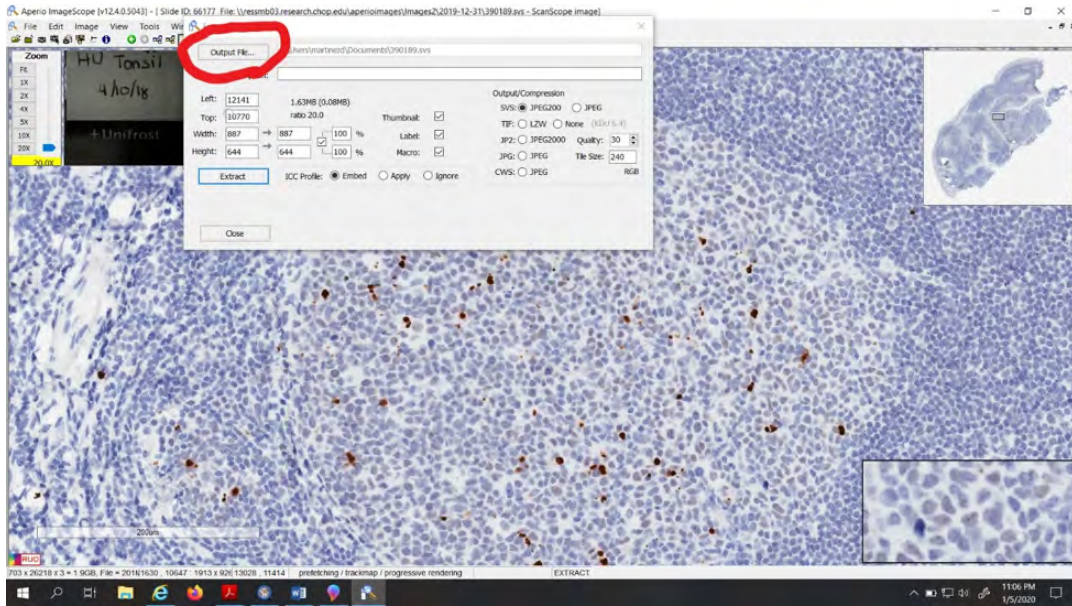

After selecting the extract region tool the cursor will now change to the cross hair icon when hovering over the image. Left click to drag a box over the region that you want to save as your image. Once you region is selected the extract region window will appear:

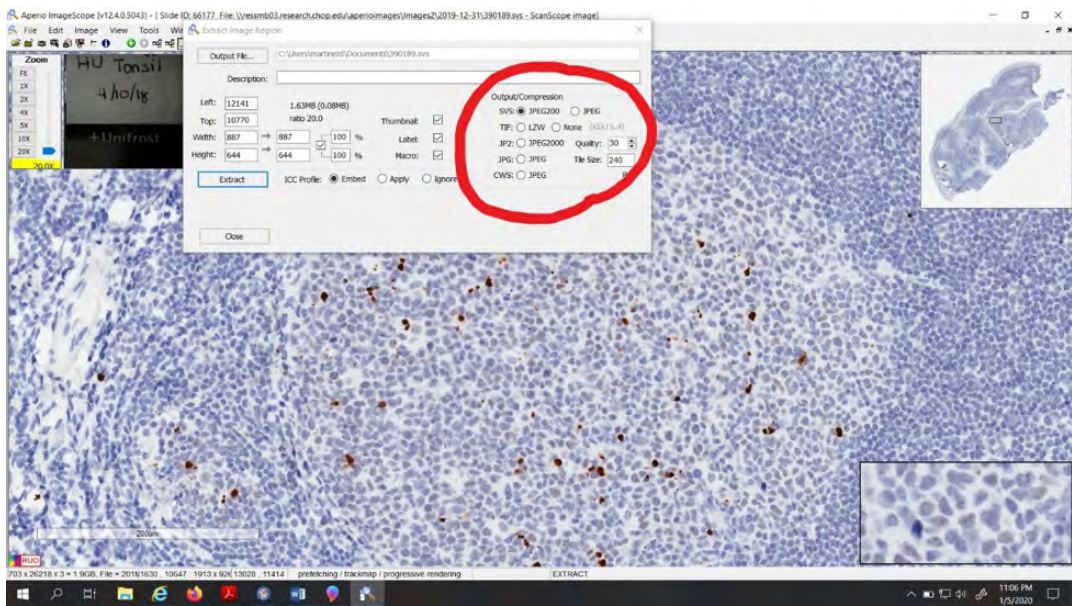

From here select “output file” to choose the name for the new image and the location that you want to save it to:

Saving Images in Image Scope

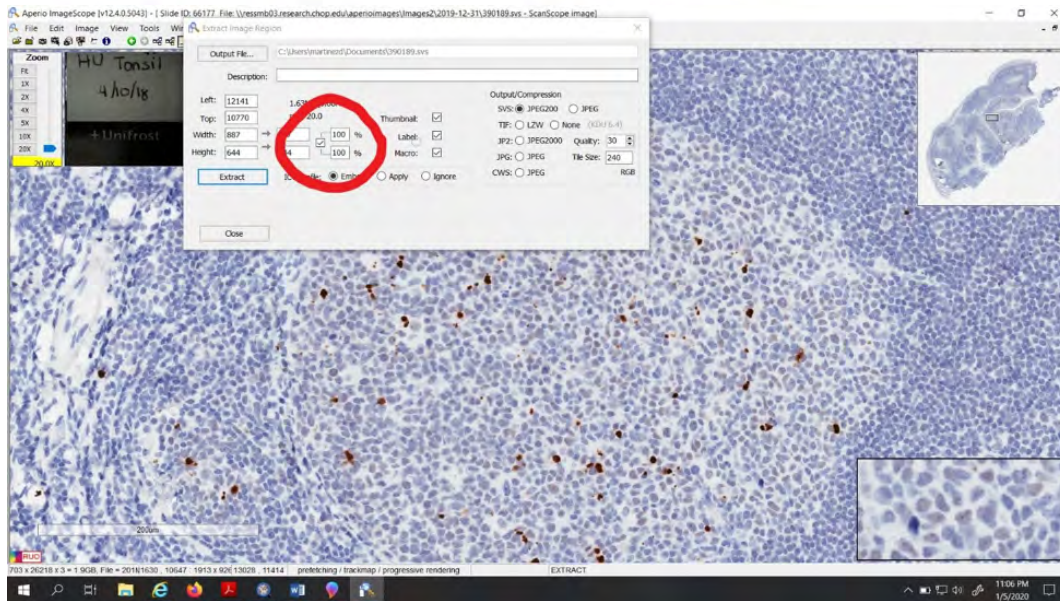

Under "output compression" you can then select the file type that you want to save you image to (TIFF, JPEG, etc) :

If you are selecting a large area or the whole slide then the file size may be very large. You can compress the image to reduce the file size here:

Saving Images in Image Scope

Once you are happy with all of the settings you can save your image by selecting the “extract” tab:

Image analysis markups and annotation layers do not appear when you save images within Image Scope. If you need to retain image markups or the scale bar screenshots must be used. You can also extract images using the Web Slide viewer (JPEG only) if you don't have access to image scope. Other viewers such as HALO, etc have their own tools for extracting images as well that can be used. Please contact us if you need further assistance.
