

TAKE THE LEAD IN MANAGING YOUR BETA THALASSEMIA

Ask your doctor about enrolling in the Thales beta thalassemia clinical study.

We are testing an investigational cell therapy for people with beta thalassemia who require regular blood transfusions. The research study consists of a one-time administration of a person's own blood stem cells, which have been genetically edited. The goal of this trial is to test the safety and effectiveness of this infused cell therapy to reduce or eliminate the need for transfusions.

You May Qualify for this Study if You:

- Are 18-40 years old
- Have been clinically diagnosed with beta thalassemia
- Have been dependent upon red blood cell transfusions over the past two years

Additional criteria will be assessed by the study doctor to confirm if you are eligible.

All study-related medications, clinic visits, lab tests, and other tests will be provided to eligible study participants at no cost. Study participants will receive reimbursement for travel; transportation assistance may be available.

ASK YOUR DOCTOR ABOUT PARTICIPATING IN THE THALES STUDY TODAY.
